

Pico Quantitative Trading (Pico) is a leading provider of technology services for the financial markets community. Pico provides a best-in-class portfolio of innovative, transparent, low-latency markets solutions coupled with an agile and expert service delivery model.

Business Challenge

- **Poor First Implementation** - The partner who implemented ERP Cloud for Pico did not follow Oracle best practices and was unable to get the customer live
- **Difficult Conversions** - One of the biggest challenges with getting live was completing the data conversions from their legacy systems
- **International Acquisition** - Pico acquired an entity in Ireland leveraging SAP that needed to be migrated to the new Oracle Platform to provide a consolidated view of the business

Solutions

- **Leverage, but Reimplementation** - Peloton took a holistic approach to the design to leverage existing work where possible, but ultimately drive best practices and solid documentation
- **Oracle Cloud Procurement** - The implementation of Oracle Cloud Procurement provided a control structure to control indirect spend for Pico Quantitative
- **Virtual Delivery** - Peloton leveraged their virtual delivery methodology and a team disbursed globally to successfully deliver Pico to the Oracle Cloud

Impact

- **Single Source of Truth** - Integration of Financial & Operational data from systems in their data warehouse
- **Seamless Integration & Process Automation** - For all key business functions which improves coordination between quoted and executed jobs and allows resources to focus on value-add analysis
- **Enhanced Profitability Analytics & Decision Making** - Actionable analytics detailing the impact of different products and operational drivers that impact profitability
