

## Faster, Smarter, Audit-Ready

Insurance carriers struggle with manual, spreadsheet-driver, and overly complex allocations models that are inflexible and challenging to audit. Anaplan enables a dynamic, real-time allocation capability that scales with complexity, ensuring accuracy and compliance at the speed the insurance industry needs.

## Allocations Model Benefits

Peloton's solution delivers a user-friendly yet powerful platform for generating and planning audit-ready allocations, providing your organization with impactful benefits.

- Automation of complex allocation logic to improve and quicken results.
- Market-leading agility to tackle any logic change in hours, not days.
- Full traceability of data and business logic to better understand allocated results.
- End-to-end connectivity, linking business decisions and data from across your organization.
- Self-reliance to expedite scaling and updates.

## AI-Driven Finance Transformation

Building upon these capabilities, Peloton tailors its solution to your business needs, delivering a powerful and distinct allocation solution. The most common allocation use cases:

- Organization Level Expense (Product, Lines of Business, Cost Center, etc.)
- IT/Shared Service Expense
- Reinsurance Expense
- Investment Income
- Actuarial Costs

Ready to modernize your allocations process?
