

Modernize Your Supply Chain UI and Unlock AI-Powered Intelligence in Weeks

Oracle's Redwood Design System offers supply chain organizations a transformative opportunity to modernize user experiences while activating embedded AI capabilities that drive measurable business value. However, migration from Classic UI presents significant challenges: protecting custom configurations, minimizing disruption, managing change, and ensuring teams leverage intelligent automation features. Peloton Consulting Group's Redwood Accelerator addresses these challenges with a proven five-phase methodology that compresses traditional migration timelines by 50% to 70% while unlocking AI-powered procurement recommendations, predictive demand sensing, and intelligent workflow automation.

As one of Oracle's strategic partners, Peloton brings deep SCM expertise, proven Fit-to-Modern Methodology, and comprehensive change management capabilities that ensure your teams embrace modern, intelligent ways of working.

The Supply Chain Challenge

Today's supply chain leaders face mounting pressure to deliver operational excellence with limited resources:

- **User Experience Gap:** Legacy interfaces slow down procurement, planning, and logistics teams.
- **Untapped AI Potential:** Embedded Oracle AI capabilities remain dormant and underutilized.
- **Mobile Access Demands:** Field teams need intuitive access to inventory, orders, and supplier data.
- **Integration Complexity:** Custom configurations and integrations risk breaking during migration.
- **Change Resistance:** Users fear disruption and learning curves with new interfaces.

The Peloton Redwood Accelerator Approach

Our proven five-phase methodology delivers rapid, low-risk migration while unlocking intelligent automation:

Phase 1

Strategic Discovery & AI Visioning (2-3 weeks): Assess SCM configuration, conduct AI visioning workshops, validate data readiness. **Deliverables:** Readiness report, phased roadmap, AI opportunity catalog (up to five features), data validation report.

Phase 2

Foundation & Configuration (3-4 weeks): Migrate custom code, configure Redwood profiles and security roles, implement up to five AI features. **Deliverables:** Configured development environment, migrated customizations, implemented AI features, integration documentation.

Phase 3

Pilot, Testing, & Validation (3-4 weeks): Execute comprehensive pod-by-pod testing, launch AI pilots, optimize workflows. **Deliverables:** Test results, user acceptance sign-off, AI validation report, performance benchmarking.

Phase 4

Change Enablement & Deployment (2-3 weeks): Deliver training using Breakaway Methodology, execute communication plan, coordinate cutover. **Deliverables:** Training curriculum, communication toolkit, deployment runbook, Go-Live checklist.

Phase 5

Hypercare & Optimization (4-8 weeks): Provide dedicated support team, monitor adoption metrics, fine-tune configurations. **Deliverables:** Status reports, issue tracking dashboard, adoption analytics, optimization recommendations.

Flexible Engagement Options

Option A: Full Redwood Migration with AI Activation (14-18 weeks)

Complete migration from Classic to Redwood UI with comprehensive AI feature implementation across all supply chain modules.

Option B: AI Quick-Start for Existing Redwood Customers (6 weeks)

Accelerated AI implementation: Discovery & prioritization (Week 1), enable five AI features (Weeks 2-3), validation & UAT (Weeks 4-5), documentation & training (Week 6). Ideal for organizations ready to rapidly unlock AI value.

Key Benefits

- **Accelerated Migration:** 50% to 70% faster than traditional approaches with proven methodology.
- **Enhanced User Experience:** Intuitive interfaces, mobile-first design, and role-based dashboards improve productivity.
- **AI Value Realization:** Intelligent procurement recommendations, predictive demand sensing, automated workflows.
- **Business Impact:** 80%+ user adoption within 90 days, reduced training costs, improved efficiency, increased ROI.
- **Industry Expertise:** Deep experience in manufacturing, distribution, and logistics with Oracle Platinum Partner credentials.

Why Oracle's Most Successful Customers Partner with Peloton

Oracle Strategic Partner & Business Impact Partner of the Year

- **Fit-to-Modern Methodology:** Ensures alignment with Oracle's product roadmap and Modern Best Practices.
- **Deep Oracle Partnership:** Peloton runs on Oracle Cloud ERP and HCM, providing direct relationships with Product Development teams.
- **Industry Experience:** Manufacturing, distribution, and supply chain expertise for industry-specific requirements.
- **Proven Change Management:** Breakaway Methodology ensures teams embrace technology, not just adopt it.
- **One Peloton Way (OPW):** Comprehensive governance, reporting, and collaboration tools ensure transparency.
- **Business Adoption Modelling (BAMs):** Early, frequent system access drives familiarity and adoption before Go-Live.
- **Oracle's Recognized Growth Partner:** Proven success maximizing Oracle Cloud investments across ERP, HCM, SCM, and EPM.

Get Started Today

Step 1: Schedule your Strategic Discovery & AI Visioning session.

Step 2: Review your custom migration roadmap and AI opportunity assessment.

Step 3: Launch your Redwood transformation with confidence.

Don't let outdated interfaces limit your supply chain performance. Activate the modern, AI-powered experience your teams deserve.
